Senior Software Developer

Senior Full-Stack Software Engineer who excels at quickly mastering unfamiliar domains and delivering end-to-end solutions to complex problems. Known for a strong focus on code quality, performance, and user experience. Frequently selected to modernize and redesign complex legacy systems, improving scalability, maintainability, and application performance while navigating challenging technical and business requirements.

SKILLS

Languages: PHP, C# (.NET 8), TypeScript, JavaScript, SQL (MySQL), GraphQL

Frameworks/Libraries: React, Zend/Laminas, Mezzo, ASP.NET Core, Roadrunner PHP, Doctrine

Other Technologies: Docker, Node.js, Bash, GitLab CI/CD, Kafka, Kubernetes, Helm, Composer, npm, HashiCorp Vault

WORK EXPERIENCE

Paycom

07/2023 - Present

Full-stack software development across HCM products, client integrations, reporting, and custom solutions, collaborating with technical teams, clients, and third-party vendors.

Software Developer • Full-time **Oklahoma City, OK, United States**

- Subject-matter expert for module on: performance optimization, microservice architecture, DevOps, and code quality.
- Improved a high traffic endpoint, improving data-load times by 40%, decreasing search times by up to 300%, and decreasing backend memory usage by up to 1000%.
- Extracted complex legacy PHP employee import functionality to dedicated C# microservice, enhancing the import batch size from ~1000 to ~500,000, which improved efficiency and reduced manual data migration hours by 10000%.
- Created custom CI/CD components to optimize pipelines reducing various repository pipeline times by up to 100%.
- Optimized page load functionality for the 2nd highest traffic application page, reducing load time by 25%, which significantly improved user experience.
- Piloted and established module code documentation standards using GitLab pages to support AI-assisted development.
- Improved MySQL query performance across employee data searches by optimizing indexes, joins, and where statements, improving query times by up to 200% and reducing memory usage by up to 100%.
- Established module React/Typescript frontend linting and quality standards, improving code readability and reducing simple common frontend related bug occurrences.

EDUCATION

Baylor University

Bachelor of Science - BS in Computer Science
